

**Mandatory Language for Monitoring and Reporting Violation  
TOTAL ORGANIC CARBON, ROUTINE MAJOR**

**GBRA PORT LAVACA PWS 0290005** has violated the monitoring and reporting requirements set by Texas Commission on Environmental Quality (TCEQ) in Title 30, Texas Administrative Code (30 TAC), Section 290, Subchapter F. Public water systems that use a series of treatment processes that includes coagulation, flocculation, sedimentation or clarification, and filtration as part of the overall treatment protocol must monitor Total Organic Carbon (TOC) and report the results of that monitoring to the TCEQ on a monthly basis.

We failed to monitor the following constituents: TOCMOR  
This violation occurred in the monitoring period: January 2023

Results of monitoring are an indicator of whether drinking water is protected from potential adverse health effects associated with disinfectants and disinfection by-products. We did not complete all monitoring and/or reporting for disinfectant by-product precursors, and therefore TCEQ cannot be sure of the TOC levels in your drinking water during that time.

We are taking the following actions to address this issue:  
We have provided our TOCMOR to TCEQ in a timely manner and have returned to compliance as of 07/10/2023.

We have implemented standard operating procedures to ensure timely monthly sampling.

Please share this information with all the other people who drink this water, especially those who may not have received this notice directly (i.e., people in apartments, nursing homes, schools, and businesses). You can do this by posting this notice in a public place or distributing copies by hand or mail.
